D-Link - Ændring af funktion (bridge-/routermode)

- 2018-06-01 - D-Link

For at kunne ændre denne funktion forudsætter det, at du er logget ind i routeren.

[Vejledning kan findes her](#)

Ændring af funktion (bridge/router mode)

1. Log ind i routeren - se ovenstående
2. Vælg "Settings"
3. Klik på "Internet"
4. I feltet "Device mode" ændres routerens funktion fra "Router mode" til "Bridge mode" eller omvendt.
5. Klik på "Save"

The screenshot shows the D-Link router's web interface. At the top, there's a navigation bar with 'Home', 'Settings', 'Features', and 'Management'. The 'Settings' tab is active. Below the navigation bar, the 'Internet' settings page is displayed. On the left, there's a globe icon and the text 'Settings >> Internet'. The main content area has a heading 'Internet' and a description: 'Use this section to configure your Internet connection. There are several connection types to choose from Static IP, DHCP, PPPoE, PPTP, L2TP, and 4G LTE. If you are unsure of your connection method, please contact your Internet service provider. If you select the PPPoE option, you will need to remove or disable any PPPoE client software on your computer.' A dropdown menu is open, showing options: 'Wizard', 'Internet' (selected), 'Wireless', 'Network', 'SharePort', and 'mydlink'. Below the dropdown, there's a 'Device Mode' dropdown set to 'Router Mode' and a 'My Internet Connection is:' dropdown set to 'Dynamic IP (DHCP)'. A 'Save' button is visible on the right. At the bottom right, there's a link for 'Advanced Settings...'.
